### SMALL INDUSTRIES DEVELOPEMNT BANK OF INDIA

SIDBI-WRAPPER UDYAM API

VERSION 1.1

01-03-2024

**Prepared By** 

1. Vincent Joseph 2. Vigneashwaran R

### **Token API:**

**Description**: This API is used to generate the JWT token by using username and password to validate the users.

Url: https://uatpartner.sidbi.in/user/auth/generate-token

```
API Request:

```

# **Encryption Decryption Logic:**

### **ENCRYPTION LOGIC:**

- 1. Generate a random session key.
- 2. Use AES 128-bit Symmetric Encryption algorithm to encrypt the data with the randomly generated session key.
  - a. Message Digest SHA-256
  - b. Encryption Type- AES128
  - c. Cipher to be used- AES/GCM/NoPadding
  - d. Base64 Encoded
- 3. Encrypt Session key using RSA with the public key of SIDBI and place the encrypted key in SessionKey tag.

- Encryption Type- RSA
- Cipher to be used- RSA/None/OAEPWithSHA1AndMGF1Padding
- Base64 Encoded
- 4. Send the same request to Authentication Token Service.

## **DECRYPTION LOGIC:**

- 1. Decrypt the randomly generated session key with the client's private key using RSA algorithm.
  - a. Base64 Decoded
  - b. Encryption Type- RSA
  - c. Cipher to be used-- RSA/None/OAEPWithSHA1AndMGF1Padding, BC
- 2. The decrypted session key will then be used to decrypt the value using AES 128 algorithm.
  - a. Base64 Decoded
  - b. Message Digest SHA-256
  - c. Encryption Type- AES128
  - d. Cipher to be used- AES/GCM/NoPadding
